

SecureIN

An Enterprise Security Software
to issue the Photo Visitor Badge

The requirement to fortify the Gates is not new. Since ages empires have strived to have strong gates and astute management at the gates. In recent times all organizations require a tab on the visitors and vehicles moving through the gates. The security, visitor observation and vehicle management of activities at the gate is of paramount importance.

SecureIN, is an **Enterprise Security Software** for controlling, monitoring and authorizing visitors in the company. It allows visitor photograph capturing, online visatee list, communication between security and employees, visitor authentication by the visatee, gatepass printing with visitor's photograph, current visitors list, out-time posting, visitor history etc.

"SecureIN is highly effective in managing visitors at the entry points. Data entry is fast and simple because it automatically picks up information about a visitor from the database on subsequent visits. Outgoing entry is also quick and simple. The reporting module is powerful and many useful reports like total number of visitors at any given point of time, statistics on number of users visiting per day/week/month etc."

How it works

When a visitor arrives at the gate to meet an employee, his image is captured at the gate using a web-camera and is sent to the employee, through **Intranet**. A pop-up message appears on desktop of Employee's computer. The employee can see the visitor photograph and other details and authorize the visitor to enter the organization. If the visitor is approved, Security Staff print the visitor gate pass or badge with visitor photograph and other details that can be customized as per the requirement.

If the Employee is not equipped with a Computer, the Security Staff can call him over telephone, and secure the permission.

The software not just records and maintains the visitor details but also provides important reports and utilities like - top organization sending visitors, top employees receiving visitors, current visitors, black list visitor and organization etc.

SecureIN can simply overcome a lot of issues faced by the security staff. A lot of important visitor and vehicle data can queried in case of an exception to tack culprits. Protect your organization with **SecureIN**.

Basic Features

- Record and control visitor entry and exit into the organisation
- Authorize visitor entry into the organization by taking permission from the staff
- "You have a visitor" flash on the user's PC desktop with visitor photograph
- Print Gatepass with / without visitor photograph
- Record visitor details (Name, Address, Photograph, Identity Card, Telephone no. etc.) in the data base
- Unlimited users with user rights and restrictions
- "Do not Disturb" facility

Technical Issues

Terminals Required:

Check-in-counter : As many as check-in counters can be established. One Computer, Web Camera, and Printer shall be required at each counter.

Check-out-counter: As many as check-out counters can be established. One Computer, Web Camera, and Printer shall be required at each counter.

At Employees End: Each employee should have a PC at his desk, if he needs to see the Visitor's Details / Photograph before permitting him. Else the security staff can enquire with the Employee through phone, and on confirmation issue the Visitor Pass.

Please Note : Check-in and Check-out can be done from a single gate also, if entry and exit points are same, and even Check-in / Check-out counter can be same in small organizations.

Server Database – The software supports Client – Server Architecture. The data from all the security gates is kept at a central server, which can be

accessed from various officer locations in the organization also intranet messaging activity can be orchestrated.

Standard Hardware Configuration (Client):

1. Windows XP operating systems.
 2. Backend – MS SQL server or Access Database.
 3. 1GB RAM, 200 MB of HDD space for Software Installation
 4. USB Web Cam (Make - Intel, Logitech, D-Link, Creative etc.) & Printer.
